Dear Admissions Committee:

I am honored to recommend Max Ursenbach for admission to your university. As his school counselor, I have had the privilege of observing Max's academic growth, dedication, and personal development over the past few years. His journey has been one marked by resilience, leadership, and a genuine curiosity for learning, making him an outstanding candidate for your program.

Max is a remarkable young man with a clear passion for understanding the human body and a deep commitment to pursuing a career in the medical or health sciences field. His interest in Biology and Kinesiology stems from his fascination with the mechanics of the body. In his junior year, he enrolled in Anatomy & Physiology Honors, a challenging course that not only piqued his intellectual curiosity but also motivated him to explore various avenues within health sciences. His performance in the class, where he delved into the functions and interactions of muscles, bones, and tendons, was impressive. Through Anatomy & Physiology Honors, he learned the science behind human movement, which he has applied to his own experiences as an athlete, improving his performance on the baseball field.

Max's perseverance is one of his distinctive qualities. When he was placed on the JV baseball team as a junior, he could have felt discouraged, but instead, he saw this as an opportunity to grow. He dedicated himself to improving his skills and played with consistent effort and enthusiasm. His diligence paid off when he was invited to join the varsity team for the CIF playoffs, and he has since become a key player on the team. This experience speaks to his willingness to rise above setbacks and use challenges as a means for growth, a mindset that will serve him well in his college and professional endeavors.

In addition to his perseverance, Max has shown natural leadership skills that set him apart from his peers. During his time on the JV team, he emerged as a mentor for younger players, guiding them with his knowledge and helping them refine their mechanics. His presence on the team created a supportive environment where his teammates felt encouraged and motivated. His ability to guide others, even while working on his own skills, is indicative of his potential as a future leader in any field he chooses to pursue.

Academically, Max has demonstrated notable growth. Though he initially faced challenges in staying engaged with certain subjects, his passion for Anatomy & Physiology Honors sparked a newfound enthusiasm for learning that carried into his senior year. This year, he enrolled in the EMR (Emergency Medical Responder) & Medical Occupations class, where he is gaining practical, hands-on experience in emergency medical care. The skills he is developing in this course, along with his enrollment in college-level English, show his readiness for the academic rigor of college and his desire to build a strong foundation for a career in healthcare.

Beyond academics and athletics, Max has shown a genuine commitment to making an impact on others. His career aspirations reflect his desire to improve people's lives and contribute to their well-being. He has carefully considered his strengths, sought guidance from professionals in the medical field, and researched programs in both Kinesiology and Biology. His proactive approach to preparing for his future is a testament to his maturity, focus, and drive. Max is a dedicated student who is eager to reach his goals. His resilience, leadership, and intellectual curiosity will make him an asset to any academic community. I am confident that he will thrive in your program, and I strongly recommend him for admission to your university.

Sincerely,

Tania Barricklow
School Counselor
